# Press Release

July, 2023

We are bringing out that the OMNIA project partners have gathered in another transnational project meeting which was held in the beautiful country of Malta, on June 8-9th. This meeting served as a crucial platform for project partners to meticulously plan and strategize the next steps towards the project management and to empower a sustainable and inclusive future. Our focus is on actively contribute to shaping a greener world for future generations!

Supported by the Erasmus+ programme, the OMNIA project seeks to provide three key project results: e-learning platform, networking platform, common curriculum and methodologies and digital training and education materials.

During this fruitful meeting, project partners had the opportunity to re-establish a shared understanding of the project's goals and collaboratively define the subsequent steps to be undertaken. The meeting agenda comprises crucial points for discussion, including: Objectives and activities, allocation of tasks and partner roles, presentation of the work packages in detail, quality assurance, evaluation, and risk management.

The Cooperation partnerships in youth for OMNIA project comprises organisations from Portugal, Türkiye, Spain, Belgium, Romania and Malta. We are excited to collaborate with our beloved partners and work towards empowering green entrepreneurship and circular economy.

In terms of project progress, significant developments have been made by our dedicated partners. As for PR1 and PR2, the networking and e-learning platforms are now fully developed and have entered the pilot testing phase. Each partner will test the platforms and the feedback will be gathered in the upcoming weeks. Furthermore, the platforms manual will be given to each partner to provide information on how to monitor and upload courses.

Turning our attention to the broader project outcomes, the curriculum and methodologies have been successfully completed. The clear goal is to provide well-structured educational content that supports young individuals who are NEETs, as well as other relevant target groups. The primary focus is on fostering knowledge and skills of green entrepreneurship and the principles of a circular economy.

At present, our partners are diligently working on the creation of digital training and educational materials. These materials are designed to offer continuous and sustainable opportunities for the future endeavors of young NEETs, enhancing their knowledge in the realm of green and circular economy. The materials will be translated into six partner languages, ensuring accessibility for a wide audience.
